This is unevaluated in April 19h9, of snoke rising almost perpendicularly from the ground, from a point which approximately had the coordinate #830; 1/1,528; E. After about 50 seconds the snoke trail was lest to sight. The same phenomenon was seen again in late April 19h9, No such observations were made again until October 19h9, what phenomenon was recordinated that it was 50 km northeast from his place of observation, 70km southeast of Stalingrad. According to prevailing rumore the launchings were connected with a factory in Astacham. 2. During the period from April to June 19h9, on clear days, a white-creek trail of snoke rising almost perpendicularly from the ground. The snoke breath was very wide near the ground as other at a deconation had taken place. The formation of a snoke making of the factory in Astacham. Duchasiled the period from April to June 19h9, on clear days, a white-creek trail of snoke			DELOW)	(LISTED	JUPT			RED	CQUI
1. In the Stalingrad area in April 19h9, of smoke rising almost perpendicularly from the ground, from a point which approximately had the coordinates 18930 N/150281E. After about 30 seconds the smoke trail was lost to sight. The same phenomenon was seen again in late April 19h9. No such observations were made again until October 19h9. What phenomenon was read again to the coordinated which approximately had the coordinates 18930 N/150281E. After about 30 seconds the smoke trail was lost to sight. The same phenomenon was seen again in able to recognize vapor trails produced by aircraft, believed be ceterined extensions. The launching site could not be ceterined extensions. The launching site could not place of observation. The southeast from his runors the launchings were consected with a factory in Astrakhan. 2. During the period from tyril to June 19h9, on clear days, white-grey trail of stoke rising almost perpendicularly from the ground. The smoke trail was very wide near the ground so that it appeared that a detonation had taken place. The formation of a smoke mushroom was not observed. The snoke began to disappear in about 10 minutes. Decument No.	25 X 1		LEMENT TO	SUPPL REPOR	LATE)F	
THIS IS UNEVALUATED INFORMATION The smoke train almost perpendicularly from the ground, from a point which approximately had the coordinates 36301M /159281E. After about 30 seconds the smoke train was lost to sight. The same phenomenon was seen again in late April 1919. No such observations were made again until October 1919. what phenomenon was recket launchings. The launching site could not be determined estimated that it was 50 km northeast from his rumors the launchings were connected with a factory in Astralcham. 2. During the period from April to June 1919, on clear days, white-rrey train of mode raising almost perpendicularly from the ground. The smoke trail was very wide near the ground so that it appeared that a detonation had taken place. The formation of a smoke mashroom was not observed. The smoke began to disappear in about 10 ninutes. Observed this phenomenon four or five times. The site of the launchings was about 100 km cast of Stalingrad. similar launchings
